

Request for Proposal for Solar Systems in 10 Schools in Dharuhera Block, Gurugram District, Haryana

About Habitat for Humanity India

Driven by the vision that everyone needs a decent place to live, Habitat for Humanity India began in 1983 as a grassroots effort. The housing organisation has since grown to become a leading housing nonprofit that has helped over tens of thousands of families in India build or improve a place they can call home. Through its housing, WASH (Water, Sanitation, and Hygiene) and housing disaster resilience and response programmes, Habitat for Humanity India has positively impacted the lives of over 7.7 million people across the country. Through financial support, volunteering or adding a voice to support affordable housing, everyone can help families achieve the strength, stability and self-reliance they need to build better lives for themselves. Through shelter, we empower.

Renewable and sustainable energy sources in the form of solar energy can be a one-time and permanent solution for rural households in India. Solar photovoltaic power can effectively be harnessed providing huge scalability in India. Solar also provides the ability to generate power on a distributed basis and enables rapid capacity addition with short lead times. Solar energy-based decentralized and distributed applications have benefited millions of people in Indian villages by meeting their cooking, lighting and other energy needs in an environment-friendly manner. Aligned with the organization's mission and vision, Habitat for Humanity India will implement solar-based power generation systems in selected institutions, such as schools and health centers, as well as in the homes of socially and economically vulnerable populations across the country. The vendors are required to install these systems in accordance with the approved technical specifications and project requirement. To learn more, donate or volunteer, visit www.habitatindia.org
